

European ISDN User Forum: 8th Plenary Meeting. Stockholm, 11-13.4.1994

European ISDN User Forum

Telia International is very pleased to host the European ISDN User Forum. Since September 1990, users have been meeting to discuss their needs and experiences, with each other, and with the network operators and equipment suppliers.

These meetings, established and hosted by the European Commission, have become the European ISDN User Forum, known as EIUF.

EIUF is an open forum wherein existing and potential users of ISDN in Europe can meet to define their requirements and to discuss ISDN applications.

Then, by working together with network operators and suppliers, successful solutions to meet user requirements can be developed.

EIUF objectives are:

1. To promote ISDN in Europe and to provide users with the opportunity to influence the development of ISDN to better reflect their needs.
2. To identify ISDN applications, verify the technical and commercial feasibility of proposed applications, agree on vendor independent solutions, and to facilitate their timely and harmonised implementation.
3. To introduce user requirements to ETSI, ETNO and other organisations to liaise with these organisations.
